TalkMaster™ FOCUS

Fail Forward/VM

TalkMaster FOCUS Licensing Option for Ensuring Availability of Critical Communications.

Description:

TalkMaster™ FOCUS is the industry-leading platform for managing IP audio endpoints. IP7 intercoms, speakers, amplifiers, horns, and zone controllers can be connected over local and wide-area networks.

TalkMaster Focus Server (SW-TMF-FF) upgrades a TalkMaster FOCUS License to enable the same license key to be used on all of your fail forward and test servers (TalkMaster FOCUS Licenses are typically tied to a CPU Serial Number).

Using the Fail Forward/VM License gives you the flexibility to choose the redundancy method for backing up your critical communications and the hardware that it is deployed on.

The Fail Forward/VM license can be used on your Primary, Fail Forward, and Test TalkMaster servers and supports VMWare's™ vMotion or Microsoft's™ Live Migration environments.

Features:

- **Single license for deployment of TalkMaster Focus on any server**
- **Use on one or more Fail Forward servers for hot standby**
- **Use on virtual machine clusters or high availability installations where the CPU serial number may change**

TalkMaster Focus is mission critical & operator friendly. The TalkMaster Focus Software Suite can be found in:

- **Education (K-12 & Higher Ed)**
- **Transportation & Parking**
- **Military & Government**
- **Industrial & Manufacturing**
